1

Make a red light that you can adjust the brightness

2

Make a motor that you can turn on and off without touching the power source

3

Make it hot!
Get the temperature sensor to read above 20°C

4

Make it cold!
Get the temperature sensor to read below 15°C

5

Make a light that can wrap around a pencil and light up when it is dark outside

6

Make a light that can wrap around a pencil and light up when it is cold outside

7

Make a circuit that serves a purpose that would be helpful in your community

8

Pitch your circuit to the group as if you were selling it as a product
